Background

Senate Bill 1976 (SB 1976, Torlakson, Chapter 850, Statutes of 2002) requires the Energy Commission, in consultation with the California Public Utilities Commission to report on the feasibility of real-time, critical peak, and other dynamic pricing tariffs in California. This report to the Legislature and Governor will investigate how these tariffs could either reduce peak demand or shift peak demand to off-peak periods.

Purpose of the Workshop

At this meeting, the Energy Commission staff will present the proposed outline of a report to the Legislature on the feasibility of real-time, critical peak, and dynamic pricing tariffs, which is enclosed with this notice. Based on comments received at this workshop and consultations with the California Public Utilities Commission and the California Power Authority, the Energy Commission staff will revise the proposed outline for the Commission to consider.
